

THE MOST ADVANCED SIMULATED SCREENS TO DATE

## TEMPUS ALS IN REALITI 360

In collaboration with Philips, iSimulate have developed the simulated Tempus ALS premium screens in REALITI 360. The Tempus Pro Monitor screen and the Tempus LS defibrillator screen work seamlessly together to create a unique simulated platform. Providing educators the flexibility to train on a wide range of clinical scenarios. You are able to use the simulated screens independently or connect the simulate Tempus Pro and Tempus LS to simulate the life-like Tempus ALS dual screen platform.

## > SIMULATED TEMPUS PRO AND TEMPUS LS SCREENS INCLUDE THE FOLLOWING FEATURES:

- Full range of vital signs monitoring parameters with manual, synchronized cardioversion and pacing
- Large color display with multiple waveform configurations and large numeric view
- Capture of all vital signs, images and event log through the Training Management System (TMS)
- Send ultrasound and laryngoscopy images and video to the Tempus Pro screen using the Media feature on Control

### > TEMPUS PRO SIMULATION

- 3, 4 and 5 lead monitoring, including 12 lead acquisition
- Pre-set Adult, Paediatric and Neonate alarm settings

### > TEMPUS LS SIMULATION

- Fully featured with manual and AED defibrillator modes
- External pacing with fixed and demand modes
- 3 lead monitor

## › iSIMULATE HAS TAKEN THE INNOVATIVE TEMPUS ALS DUAL DEVICE MONITORING AND DEFIBRILLATION SYSTEM AND BROUGHT IT TO REALITI 360

---

By simply adding an additional iPad®, you can now have 2 monitor screens running side-by-side. Each Tempus screen can be used to simulate monitoring or therapy functions separately.

Using the new Additional Monitor feature in REALITi 360, the screens can connect wirelessly to behave just like the Tempus ALS system. Both screens are controlled from a single Control iPad®, providing a seamless simulated solution for trainers.

Just like the Tempus ALS, in simulated resuscitation cases the Tempus LS can focus on defibrillation therapy while the Tempus Pro can be used for complete simulated patient monitoring.

The Training Management System (TMS) provides a complete data rich export of the scenario for detailed debrief.
